

# Ureteral Dilator

Designed for ureteral dilation prior to ureterorenoscopy, as well as step-by-step dilation of the intramural tunnel and ureter, or for precise stone manipulation.

## Key Features

- ▷ **Smooth Surface:** Allows for easy introduction, reducing friction during insertion
- ▷ **Tapered Tip:** Designed for controlled insertion and reduced trauma during dilation
- ▷ Available with and without hydrophilic coating

Available in:

|             |                                                                 |
|-------------|-----------------------------------------------------------------|
| Types       | Normal, PU                                                      |
| Color       | Blue and Green                                                  |
| Coating     | With and without hydrophilic coating                            |
